

1. Login to docker engine or create session online on docker playground

Execute the following commands:

\$ docker pull <image-name>---This command helps you pull images from the central docker repository

\$ docker images This command helps you in listing all the docker images, downloaded on your system.

\$ docker run <image-name> This command helps in running containers, from their image name.

\$ docker ps This command helps in listing all the containers which are running in the system

\$ docker ps -a If there are any stopped containers, they can be seen by adding the “-a” flag in this command

This slide left blank for whiteboard
