

1. Creation of Container--\$ docker create --name <container name> <image name>
2. Start Container--\$ docker start <container name>
3. Run Container--\$ docker run -it --name <container name> <image name>
4. Pause Container--\$ docker pause <container name>
5. Unpause Container--\$ docker unpause <container name>
6. Stop Container--\$ docker stop <container name>--to stop individual containers
7. To check how many containers are running--docker ps
8. To stop all running containers at once--\$ docker stop \$(docker container ls -aq)
9. Delete Container--running container cannot be directly deleted, first stop the container then delete the container using--\$ docker rm <container name> only individual container
